

High Performance Lubricants

Technical Data

Dirt Blaster

Rock Oil's Dirt Blaster is a high performance, biodegradable, detergent package suitable for most cleaning applications where the removal of dirt, oils and greases is required. Dirt Blaster is safe to use on most delicate materials but when cleaning polished alloys the product should not be allowed to dry.

Features

Caustic soda free and suitable for use with most motorcycle components

Advanced, biodegradable formulation boosts cleaning properties in hard water areas and also reduces scale build up when used through pressure washers

Outstanding performance under normal conditions with minimal agitation

The product is not classified as hazardous under current legislation although contact with eyes, as with any detergent, should be avoided

Instructions For Use:

It is recommended that Dirt Blaster is used straight from the bottle

Spray onto the surface to be cleaned, slight agitation with a soft brush may be required for heavy soiling

Rinse thoroughly with clean water, leathering is not normally required

This versatile cleaner may also be applied through hot or cold water pressure washer systems and diluted with up to 100 parts water

Important Note:

Dirt Blaster is suitable for use with most materials used in the construction of motorcycles, including paintwork, alloys and composites. However due to continual development of these materials it is strongly recommended that the product is spot tested the first time it is used.

Typical Physical Characteristics

Density @ 15C	1.030 kg/L
pH value	11.0
Appearance	Clear Green Liquid
Product Code	00500

Rev:A/14
